

— THE 12-WEEK OFF-ICE POWER + SPEED PROGRAM

POWER & *speed.*

The complete twelve-week off-season program for adult hockey players across the 19—39 age range. Block periodization. Reactive plyometrics. Max-velocity sprints. Bands and bodyweight only — no gym required. Built to the same standard used with senior pro and national-team athletes, with dedicated scaling for the 33+ sub-group.

01 — WELCOME / READ THIS FIRST

TWELVE WEEKS TO COMPETE *harder.*

This is a real off-season power and speed program for adult hockey players — built for the 19 to 39 age range with explicit scaling for the 33+ sub-group. You're skeletally mature. You can train hard. You can also injure yourself in ways an eighteen-year-old can't. This plan accounts for both.

Twelve weeks. Four sessions a week. About 65–75 minutes each. Bodyweight and bands only — no barbells, no dumbbells, no plates. That's not a compromise. It's a design choice. Variable band tension, accommodating resistance, and the contrast methods we'll use are arguably better suited to power-speed development than fixed loads.

The program is three four-week blocks. **Foundation. Specific Prep. Power Realization.** Each block does one job. You test at the start, at the end of every block, and at the very end of Week 12.

Every session has six architectural blocks — RAMP, Primer, Power, Strength, Energy Systems, Cool-Down — and every block has a training intent. No filler. No circuits. No "junk volume." Every rep earns its place.

Two non-negotiable rules across the age range: **Adductor work two times a week, every week.** And **single-leg work at minimum forty percent of lower-body volume.** Hockey is played one leg at a time on edges with constant change of direction. Bilateral barbell volume doesn't transfer the way the old-school coaches thought it did.

If you train this for twelve weeks the way it's written, you will skate faster, hit harder, recover quicker between shifts, and feel measurably more athletic at season open. The numbers will prove it. If you're 33+, read page 44 before Week 1 — it's the difference between training smart and grinding yourself into the ground.

— FROM THE COACH

FOUNDER, ELITE HOCKEY DRILLS

*Coach
David*

02 — THE METHOD / WHY THIS WORKS

BLOCK PERIODIZATION, HOCKEY *specific.*

This program follows the block periodization model used at the highest levels of strength and conditioning — the same approach that NHL, AHL, NCAA D1, and senior European pro programs use during their off-seasons.

The principle: instead of training every quality at once (a little strength, a little power, a little conditioning every week), we concentrate specific adaptations into three sequential blocks. Each block produces a residual that the next block exploits.

Block 1 builds tendon stiffness, single-leg control, and a base of work capacity — and is non-negotiable for the older sub-group whose tissues need re-acquisition every off-season. Block 2 uses that base to drive intensive plyometrics, resisted acceleration, and hill sprints. Block 3 converts the strength and power you built into hockey-relevant max-velocity speed and reactive change of direction.

The other piece: **hockey transfer**. Every session contains lateral work, every session contains rotational or anti-rotational core, single-leg work is at least 40% of the lower-body volume, and adductor strength is trained at minimum twice per week. These are non-negotiable for the sport.

01

BLOCK FOCUS, NOT MIXED BAG

Each block has a primary adaptation. Don't try to be everywhere at once. Foundation builds capacity. Specific Prep builds force. Realization expresses speed.

02

SCALE FOR AGE WITHIN THE PROGRAM

19-25 athletes can run the program as written. 26-32 athletes pay closer attention to deload weeks. 33-39 athletes follow the dedicated scaling page (page 44) — longer recoveries, reduced plyo volume on hardest sessions, more tissue work.

03

CONTRAST AND COMPLEX, NOT CIRCUIT

Heavy banded squat into unloaded jump. Heavy iso press into plyo push-up. The body learns to express force fast after heavy load. Done correctly with bands, contrast training is the highest-return method available without a barbell.

“Block periodization with hockey-specific transfer is the closest thing in adult S&C to a cheat code.”

03 — THE ROADMAP / WHERE WE'RE GOING

THREE BLOCKS. ONE *plan.*

Three four-week blocks. Each block has one job. Each block ends with a deload week and a mid-block test. The whole twelve weeks ends with a full combine and a 3–5 day taper.

THE WEEKLY RHYTHM — REPEATS EVERY WEEK

DAY 1

Lower body power —
vertical, linear, posterior
chain

DAY 2

Upper body power — push,
pull, anti-rotation core

DAY 3

Lateral power — speed/
agility, adductor focus

DAY 4

Full-body power
conditioning — energy
systems

FOUR DAYS WITH MIN 48H BETWEEN DAY 1 AND DAY 3 (BOTH LOWER-BODY INTENSIVE).

01

FOUNDATION

WEEKS 01–04 · EXTENSIVE

MOVEMENT QUALITY · TENDON STIFFNESS

“Earn the right to train hard.”

02

SPECIFIC PREP

WEEKS 05–08 · STRENGTH-POWER

INTENSIVE PLYOS · RESISTED SPRINTS · HILL SPRINTS

“Capacity becomes force.”

03

POWER REALIZATION

WEEKS 09–12 · SPEED CONVERSION

REACTIVE PLYOS · MAX VELOCITY · REACTIVE AGILITY

“Express the work. On purpose.”

04 — HOW TO USE THIS PROGRAM

SIX BLOCKS EVERY *session.*

Every session — all 48 of them across these 12 weeks — follows the same six-block architecture. The architecture is not negotiable. Each block has a training intent and a time budget. Total session length: 60–75 minutes.

01

RAMP · 8–10 MIN

Raise, Activate, Mobilize, Potentiate. Hockey-specific warm-up that prepares your CNS, hips, t-spine, and adductors. Listed on page 7.

02

CNS PRIMER · 8–12 MIN

Low-volume, high-quality plyo or activation that wakes up the nervous system before the main work.

03

POWER / SPEED · 15–20 MIN

The fast stuff. Jumps, sprints, contrast work. Max intent every rep. Full rest between sets.

04

STRENGTH · 15–20 MIN

Bodyweight + band strength. Unilateral bias. Tempo prescriptions. Anti-rotation core. Adductor work in most sessions.

05

ENERGY SYSTEM · 8–12 MIN

Alactic or alactic-aerobic intervals matching shift demand. Built to make you the player who's still skating hard in the third period.

06

COOL-DOWN · 3–5 MIN

Nasal breathing, mobility flow. How you switch off the system so recovery starts immediately. Listed on page 8.

HOW EACH EXERCISE READS

SETS × REPS

3010 · RPE 7

TEMPO / BAND TENSION / RPE

05 — WHAT YOU'LL NEED

THE *kit.*

No barbells. No dumbbells. No plates. No gym membership. This program is built around bodyweight and bands because bands give you the variable tension and explosive overload that's actually most relevant to hockey — and they cost less than a tank of gas.

ITEM 01

LOOP BAND SET

LIGHT · MEDIUM · HEAVY · ESSENTIAL

Three loop bands of different tensions — light, medium, heavy. Used for resisted sprints, banded squats and presses, glute activation, pull-up assistance, and contrast loading. The single most important piece of equipment in this program.

“Buy a set. You’ll use these for the next ten years.”

ITEM 02

PULL-UP BAR

DOORWAY OR FIXED · ESSENTIAL

A pull-up bar — doorway-mounted or fixed. Used for pulls, dead hangs, hanging knee raises, and grip work. Hockey players need pulling strength and grip — there's no good way to train them without one.

“Cheap doorway bars work. The fixed ones are better if you have the spot.”

ITEM 03

STURDY BOX OR BENCH

KNEE TO HIP HEIGHT · ESSENTIAL

A sturdy box or bench you can step on, jump off, and rest a foot on. Low height for depth drops. Knee height for step-ups and split squats. A stable patio step or coffee table works.

“Anything stable that won't collapse. Test it before you jump on it.”

ITEM 04

SPACE + TURF/ASPHALT

10M MIN STRAIGHT-LINE · ESSENTIAL

Open space — minimum 10 meters straight-line for sprints, 5 by 10 for the pro-agility. Outdoor turf or asphalt is ideal. For lateral work and bounding, a slightly bigger area helps.

“A driveway works. A turf field is better. Don't overthink it.”

OPTIONAL BUT HELPFUL Cones or markers for shuttle drills. A stopwatch or phone timer. A foam roller. A notebook for tracking your test results. Heavier tube-style band for stronger lifters in Block 2 and Block 3. A measuring tape for broad jump testing.

06 — BEFORE EVERY SESSION

THE RAMP WARM-UP.

Eight to ten minutes. Four phases. The RAMP protocol — **Raise, Activate, Mobilize, Potentiate** — is the gold-standard warm-up used at every level above youth recreation. It elevates your CNS, opens the joints that hockey tightens up, fires up your glutes and adductors, and primes your body for fast, explosive work.

R

RAISE — 90 SEC

JUMPING JACKS 30S · HIGH KNEES 30S · BUTT KICKS 30S

“Heart rate up. Body temperature up.”

Get blood moving. You should be lightly sweating by the end. Skip this and your tissues stay cold and brittle.

A

ACTIVATE — 2 MIN

GLUTE BRIDGE × 10 · Banded CLAMSHELL × 10 EA · Banded LATERAL WALK × 10 EA

“Wake up the glutes and adductors.”

Hockey skating shuts down your glutes over time. This block reverses that pattern and turns on the lateral-stabilizing muscles that protect your knees and groin.

M

MOBILIZE — 3 MIN

WORLD'S GREATEST STRETCH × 5 EA · T-SPINE ROTATION × 10 · 90/90 HIP SWITCH × 6 EA

“Hips, t-spine, ankles — the three places hockey locks up.”

Skating compresses the hip flexors, rounds the thoracic spine, and stiffens the ankle. Three movements undo all of it in three minutes.

P

POTENTIATE — 90 SEC

POGO HOPS × 10 · DROP SQUAT × 5 · A-SKIP × 10M

“Wake up the nervous system. Feel fast.”

Three short bursts of explosive, low-volume work that tell your nervous system the main session is about to start. Skip this and the first power set of your day is your real warm-up — except you'll do it cold.

07 — AFTER EVERY SESSION

THE cool-down.

Three to five minutes. The cool-down is how you tell your nervous system the hard work is over. Recovery doesn't start when you get home — it starts the moment training ends. Athletes who consistently do this recover faster, sleep better, and adapt to training more completely than athletes who skip it.

01 SLOW WALK WITH NASAL BREATHING

60–90 SECONDS

“In through the nose. Out through the nose.”

Walk slowly. Breathe in and out through your nose only. Long, slow breaths. This shifts your nervous system from sympathetic (training mode) to parasympathetic (recovery mode) within about a minute.

02 90/90 HIP STRETCH + T-SPINE OPENER

60 SECONDS EACH SIDE

“Open what training tightened.”

Sit in the 90/90 hip position. Rotate your torso open to the trail-leg side, reaching long with one arm. This unlocks both the deep external rotators of the hip and the thoracic spine in one go.

03 LEGS UP THE WALL + BREATH

90–120 SECONDS

“Heavy legs. Quiet mind. 4-second exhales.”

Lie on your back with your legs straight up against a wall. Breathe in for 4 seconds, out for 6. Repeat. This is where the work locks in — circulation restored, nervous system fully transitioned, mind cleared.

— PRE-PROGRAM SCREEN (BEFORE WEEK 1)

Can you hold a clean bodyweight squat at full depth for 30 seconds? A 60-second strict plank? 10 strict toe push-ups? If any answer is no, spend an extra week in Block 1 before progressing. If you're still going through growth-related joint pain (knees, heels, lower back), halve plyometric volume and tell a coach. No exceptions.

08 — BEFORE YOU START / THE TESTING BATTERY

EIGHT TESTS. FOUR *checkpoints*.

You test at Week 0 (before Day 1), end of Block 1 (Week 4), end of Block 2 (Week 8), and end of Week 12. Max-effort testing is permitted — you're a skeletally mature adult. Same protocol every time so the numbers are comparable. 33+ athletes: scale 30m fly to 20m fly if hamstring history is a concern.

- 01 VERTICAL JUMP — COUNTER-MOVEMENT MAX
Stand, reach wall mark. CMJ, mark peak reach. Difference = vertical. 3 attempts, best counts. Expected: 4–8 cm gain.
- 02 BROAD JUMP — MAX WITH STICK
Standing start. 3 attempts. Best counts. Stick landing — measure heel-to-line. Expected: 15–25 cm gain.
- 03 10M SPRINT — HAND TIMED
2-point stance. 2 attempts, full recovery. Best time. Expected: 0.10–0.25 sec faster.
- 04 30M FLY SPRINT — MAX VELOCITY
20m run-in, 10m timed. Best of 3. Maximum velocity benchmark. Expected: 0.05–0.15 sec faster.
- 05 5-10-5 PRO-AGILITY
Standard NHL combine shuttle. 2 attempts each starting direction. Best counts. Expected: 0.20–0.40 sec faster.
- 06 SINGLE-LEG BROAD JUMP — SYMMETRY
3 attempts each leg. Best counts. L:R ratio. Target: under 10% asymmetry by Week 12.
- 07 RSI — REACTIVE STRENGTH INDEX
Drop jump from 30cm box. Jump height (cm) / ground contact time (sec). 3 attempts. Reactive strength benchmark. Expected: 15–25% RSI gain.
- 08 COPENHAGEN PLANK — MAX HOLD
Long-lever version. Time to form break. Adductor durability. Both sides. Expected: 15–25 sec gain.

WEEKS

01–04 / 16 SESSIONS

FOCUS

MOVEMENT QUALITY · TENDON STIFFNESS

EQUIPMENT

BW + BANDS

FOUNDATION.

“Earn the right to train hard.”

Block 1 is the part most adult athletes want to skip and the part that decides whether the next eight weeks build you or break you. We're rebuilding tendon stiffness, single-leg control, and tissue quality first — because intensive work loaded onto a body that hasn't reacquired those qualities is how off-season programs end in groin pulls and patellar tendons that won't quit aching.

Extensive plyometrics teach your nervous system to absorb force again. Banded strength work with eccentric tempo loads builds the kind of strength that protects you over a 60-game season. Aerobic base and tissue prep set up everything that follows.

Volume is moderate. Intensity is moderate. Movement quality is the only thing that's negotiable upward. Week 4 is a deload — volume drops, intent stays high — then we test. The older you are, the more this block matters.

— BLOCK FOCUS

Movement quality over load. Tendons before tissue. Single-leg dominance. Adductor every session. Week 4 = deload + mid-block test. The work that protects you for the next eight weeks.

01

— FIRST WEEK OF THE BLOCK.
WEEK 01
FOUNDATION

DAYS 1 & 2

Movement quality week. Every rep teaches your body the pattern. Don't chase fatigue.

DAY 1

LOWER POWER + POSTERIOR CHAIN

END OF BLOCK 01 · WEEK 04

MID-BLOCK

test one.

Four weeks in. Test today. You should see meaningful gains on Copenhagen plank, Pallof iso, and broad jump symmetry. Vertical jump and 10m sprint may move a little — they move more in Block 2.

- 01 VERTICAL JUMP
CMJ. 3 attempts. Best counts.
- 02 BROAD JUMP — MAX
Stick landing. 3 attempts. Best counts.
- 03 10M SPRINT
2-point start. 2 attempts. Best time.
- 04 30M FLY SPRINT
20m run-in, 10m timed. Best of 3.
- 05 5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 06 SL BROAD JUMP SYMMETRY
3 ea leg. Best counts. L:R ratio.
- 07 RSI — DROP JUMP
30cm box. Jump height / contact time.
- 08 COPENHAGEN — MAX HOLD
Long-lever. Both sides.

BLOCK 01 SCORECARD

VS WEEK ZERO

TEST	WEEK 0	WEEK 4	CHANGE
Vertical Jump	___ cm	___ cm	+ ___
Broad Jump	___ cm	___ cm	+ ___
10m Sprint	___ s	___ s	- ___
30m Fly Sprint	___ s	___ s	- ___
5-10-5 Shuttle	___ s	___ s	- ___
SL Broad Jump L / R	___ / ___	___ / ___	___ %
RSI	___	___	+ ___
Copenhagen L / R	___ / ___	___ / ___	+ ___

— BLOCK ZERO TWO 02 · STRENGTH-POWER

02

WEEKS

05–08 / 16 SESSIONS

FOCUS

INTENSIVE PLYOS · RESISTED SPRINTS · HILL SPRINTS

EQUIPMENT

BW + BANDS

SPECIFIC PREP.

“Capacity becomes force.”

Block 2 is where adult athletes become measurably more powerful. The tendon stiffness and single-leg control built in Block 1 lets you handle intensive plyos — broad jumps, lateral bounds, depth drops — without breaking down. Banded loaded jumps and accommodating-resistance contrast work teach the body to express force fast under load.

Acceleration sprints with bands and hills are introduced. Resisted sprints drive stronger push-off mechanics. Hill sprints develop force production without the impact stress of max-velocity flat sprinting — perfect for the older sub-group who needs the stimulus without the joint cost.

Alactic capacity work begins — 8 to 15 second efforts at max with full recovery. This is the energy system that fuels the first three strides of every shift. Rotational power throws and scoops enter every week. Week 8 is deload + mid-block test.

— BLOCK FOCUS

Intensive plyos. Contrast / complex training. Resisted + hill acceleration. Alactic capacity. Rotational power weekly. Week 8 = deload + mid-block test.

05

— FIRST WEEK OF THE BLOCK.

WEEK 05

SPECIFIC PREP

DAYS 1 & 2

Intensive plyos begin. Every jump max effort. Every set with full recovery.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 10 MIN

- 01 **SINGLE-LEG POGO HOPS**
soft, fast — quiet feet
3 × 10 BOTH SIDES
RPE 7 · REST 60S
- 02 **DROP SQUAT — FAST ABSORB**
absorb explosively, freeze
3 × 5
FAST DOWN · REST 60S

— POWER · 22 MIN

- 03 **BANDED SQUAT JUMP**
heavy band, max vertical
4 × 5
HEAVY BAND · REST 90S
- 04 **CONTINUOUS BROAD JUMP × 3**
3 jumps no reset
4 × 3
MAX EFFORT · REST 90S
- 05 **DEPTH DROP (LOW BOX)**
absorb landing, no jump yet
3 × 5
REACTIVE PREP · REST 90S

— STRENGTH · 18 MIN

- 06 **BANDED FRONT SQUAT — TEMPO**
deep, controlled, 3-sec down
4 × 6
3110 · HEAVY BAND · REST 90S
- 07 **SINGLE-LEG RDL — BAND**
stick the bottom 1 sec
3 × 8 BOTH SIDES
3110 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN PLANK — LONG**
ankle on bench, hips up
3 × 20S BOTH SIDES
ADDUCTOR · REST 90S

— ESD · 12 MIN — ALACTIC

- 09 **SPRINT INTERVALS 15S**
max effort, full recovery
6 × 15S / 2MIN
MAX EFFORT

~75 MIN

DAY 2

UPPER POWER + ANTI-ROTATION CORE

— PRIMER · 8 MIN

- 01 **BANDED Y-T-W**
scap activation, full range
3 × 10 BOTH SIDES WAY
LIGHT BAND · REST 60S

— POWER · 20 MIN

- 02 **CLAP PUSH-UP**
clap mid-air, controlled landing
3 × 5
MAX EFFORT · REST 90S
- 03 **BANDED CHEST PRESS — EXPLOSIVE**
fast concentric, slow eccentric
4 × 6
30X0 · HEAVY BAND · REST 90S
- 04 **BAND ROTATIONAL SCOOP TOSS**
low-to-high, hips drive
3 × 6 BOTH SIDES
MEDIUM BAND · REST 90S

— STRENGTH · 18 MIN

- 05 **DEFICIT PUSH-UP**
hands on books, full ROM
3 × 10
3010 · RPE 8 · REST 90S
- 06 **BANDED ROW — STANDING HINGE**
hinge, row to ribs
3 × 12
2012 · HEAVY BAND · REST 90S
- 07 **PALLOF PRESS — HALF-KNEELING**
ribs down, resist rotation
3 × 10 BOTH SIDES
2010 · HEAVY BAND · REST 90S
- 08 **BANDED CHOP**
hips lead, control the band
3 × 10 BOTH SIDES
MEDIUM BAND · REST 90S

— ESD · 10 MIN

- 09 **HANGING KNEE RAISE**
control, no swinging
3 × 10
GRIP + CORE
- 10 **HOLLOW ROCK**
small range, controlled
3 × 15

— PEAK VOLUME OF THE BLOCK.

WEEK 07
SPECIFIC PREP

DAYS 1 & 2

Peak volume of Block 2. Hardest week of the program so far. Sleep matters now.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 10 MIN

- 01 **SINGLE-LEG POGO HOPS**
soft, fast — quiet feet
4 × 12 BOTH SIDES
RPE 7 · REST 60S
- 02 **DROP SQUAT — FAST ABSORB**
absorb explosively, freeze
4 × 6
FAST DOWN · REST 60S

— POWER · 22 MIN

- 03 **BANDED SQUAT JUMP**
heavy band, max vertical
5 × 6
HEAVY BAND · REST 90S
- 04 **CONTINUOUS BROAD JUMP × 3**
3 jumps no reset
5 × 4
MAX EFFORT · REST 90S
- 05 **DEPTH DROP (LOW BOX)**
absorb landing, no jump yet
4 × 6
REACTIVE PREP · REST 90S

— STRENGTH · 18 MIN

- 06 **BANDED FRONT SQUAT — TEMPO**
deep, controlled, 3-sec down
5 × 8
3110 · HEAVY BAND · REST 90S
- 07 **SINGLE-LEG RDL — BAND**
stick the bottom 1 sec
4 × 10 BOTH SIDES
3110 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN PLANK — LONG**
ankle on bench, hips up
3 × 30S BOTH SIDES
ADDUCTOR · REST 90S

— ESD · 12 MIN — ALACTIC

- 09 **SPRINT INTERVALS 15S**
max effort, full recovery
10 × 15S / 90S
MAX EFFORT

~75 MIN

DAY 2

UPPER POWER + ANTI-ROTATION CORE

— PRIMER · 8 MIN

- 01 **BANDED Y-T-W**
scap activation, full range
3 × 12 BOTH SIDES WAY
LIGHT BAND · REST 60S

— POWER · 20 MIN

- 02 **CLAP PUSH-UP**
clap mid-air, controlled landing
4 × 6
MAX EFFORT · REST 90S
- 03 **BANDED CHEST PRESS — EXPLOSIVE**
fast concentric, slow eccentric
5 × 8
30X0 · HEAVY BAND · REST 90S
- 04 **BAND ROTATIONAL SCOOP TOSS**
low-to-high, hips drive
4 × 8 BOTH SIDES
MEDIUM BAND · REST 90S

— STRENGTH · 18 MIN

- 05 **DEFICIT PUSH-UP**
hands on books, full ROM
4 × 12
3010 · RPE 8 · REST 90S
- 06 **BANDED ROW — STANDING HINGE**
hinge, row to ribs
4 × 15
2012 · HEAVY BAND · REST 90S
- 07 **PALLOF PRESS — HALF-KNEELING**
ribs down, resist rotation
4 × 12 BOTH SIDES
2010 · HEAVY BAND · REST 90S
- 08 **BANDED CHOP**
hips lead, control the band
4 × 12 BOTH SIDES
MEDIUM BAND · REST 90S

— ESD · 10 MIN

- 09 **HANGING KNEE RAISE**
control, no swinging
4 × 12
GRIP + CORE
- 10 **HOLLOW ROCK**
small range, controlled
3 × 20
RPE 7

~70 MIN

07

— PEAK VOLUME OF THE BLOCK.

WEEK 07
SPECIFIC PREP

DAYS 3 & 4 (CONT.)

DAY 3

LATERAL POWER + SPEED + ADDUCTOR

— PRIMER · 10 MIN

01 Banded Monster Walk + Lateral

low stance, knees out

4 × 15 BOTH SIDES WAY

MEDIUM BAND · REST 60S

02 COSSACK SQUAT

warmup flow, both sides

2 × 8 BOTH SIDES

MOBILITY · REST 60S

— POWER · 18 MIN

03 CONTINUOUS LATERAL BOUND

rhythm, max distance

4 × 6 BOTH SIDES

MAX INTENT · REST 90S

04 SKATER HOP — CONTINUOUS

no pause, push-off explosive

4 × 8 BOTH SIDES

MAX EFFORT · REST 90S

05 CROSSOVER STEP BOUND

snap the hips, full extension

4 × 5 BOTH SIDES

MAX · REST 90S

— SPEED · 18 MIN — RESISTED + HILL

06 BAND-RESISTED 10M SPRINT

partner-held, drive every step

8 × 10M

MAX EFFORT · REST FULL

07 HILL SPRINT 15M

5-10% incline, drive knees

8 × 15M

MAX EFFORT · REST FULL

— ADDUCTOR · 10 MIN

08 Banded Standing Adduction

slow tempo, control

3 × 12 BOTH SIDES

3010 · MEDIUM BAND · REST 60S

09 LATERAL LUNGE — Banded Eccentric

3-sec down into lead hip

4 × 10 BOTH SIDES

3010 · MEDIUM BAND · REST 60S

~75 MIN

SEE GLOSSARY P.45

DAY 4

FULL-BODY POWER + ENERGY SYSTEMS

— PRIMER · 8 MIN

01 WORLD'S GREATEST STRETCH FLOW

open hip, rotate, reach

3 × 6 BOTH SIDES

MOBILITY · REST 60S

— POWER CONTRAST · 24 MIN

02 Banded Squat (Heavy ISO)

10s heavy iso hold

5 × 10S

HEAVY BAND · REST 90S

03 UNLOADED SQUAT JUMP

after iso, max height

5 × 5

MAX EFFORT · REST 90S

04 Banded Chest Press — ISO

10s iso at sticking point

4 × 10S

HEAVY BAND · REST 90S

05 PLYO PUSH-UP — AFTER ISO

max reactive after band

4 × 6

MAX · REST 90S

— ESD · 12 MIN — ALACTIC POWER

06 REPEAT BROAD JUMP

5 jumps, walk back, repeat

8 × 5 JUMPS / 75S

MAX EFFORT

— ACCESSORY · 8 MIN

07 BAND ROTATIONAL PRESS — POWER

hips lead, lock at top

4 × 10 BOTH SIDES

MEDIUM BAND · REST 60S

08 FARMER CARRY (Banded)

band pulls down, stay tall

4 × 45S

HEAVY BAND · REST 60S

~70 MIN

SEE GLOSSARY P.45

08

— DELOAD WEEK. THEN THE TEST.

WEEK 08

SPECIFIC PREP · DELOAD

DAYS 1 & 2

MID-BLOCK TEST AT END OF WEEK

Deload + sharpen week. Drop volume. Maintain max intent. Mid-block test at the end.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 10 MIN

- 01 **SINGLE-LEG POGO HOPS**
soft, fast — quiet feet
2 × 8 BOTH SIDES
RPE 7 · REST 60S
- 02 **DROP SQUAT — FAST ABSORB**
absorb explosively, freeze
2 × 4
FAST DOWN · REST 60S

— POWER · 22 MIN

- 03 **BANDED SQUAT JUMP**
heavy band, max vertical
3 × 3
HEAVY BAND · REST 90S
- 04 **CONTINUOUS BROAD JUMP × 3**
3 jumps no reset
3 × 3
MAX EFFORT · REST 90S
- 05 **DEPTH DROP (LOW BOX)**
absorb landing, no jump yet
2 × 3
REACTIVE PREP · REST 90S

— STRENGTH · 18 MIN

- 06 **BANDED FRONT SQUAT — TEMPO**
deep, controlled, 3-sec down
2 × 6
3110 · HEAVY BAND · REST 90S
- 07 **SINGLE-LEG RDL — BAND**
stick the bottom 1 sec
2 × 6 BOTH SIDES
3110 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN PLANK — LONG**
ankle on bench, hips up
2 × 20S BOTH SIDES
ADDUCTOR · REST 90S

— ESD · 12 MIN — ALACTIC

- 09 **SPRINT INTERVALS 15S**
max effort, full recovery
4 × 15S / 2MIN
MAX EFFORT

DAY 2

UPPER POWER + ANTI-ROTATION CORE

— PRIMER · 8 MIN

- 01 **BANDED Y-T-W**
scap activation, full range
2 × 8 BOTH SIDES WAY
LIGHT BAND · REST 60S

— POWER · 20 MIN

- 02 **CLAP PUSH-UP**
clap mid-air, controlled landing
2 × 3
MAX EFFORT · REST 90S

End of Block 02 · Week 08

MID-BLOCK

test two.

Eight weeks in. The middle of the program. Vertical jump and broad jump usually take their first big step here. Acceleration sprints get faster. Lateral bound distances jump up. Compare against Block 1 test.

- 01

VERTICAL JUMP
CMJ. 3 attempts. Best counts.
- 02

BROAD JUMP — MAX
Stick landing. 3 attempts. Best counts.
- 03

10M SPRINT
2-point start. 2 attempts. Best time.
- 04

30M FLY SPRINT
20m run-in, 10m timed. Best of 3.
- 05

5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 06

SL BROAD JUMP SYMMETRY
3 ea leg. Best counts. L:R ratio.
- 07

RSI — DROP JUMP
30cm box. Jump height / contact time.
- 08

COPENHAGEN — MAX HOLD
Long-lever. Both sides.

Block 02 Scorecard			VS Week 04
Test	Week 4	Week 8	Change
Vertical Jump	___ cm	___ cm	+ __
Broad Jump	___ cm	___ cm	+ __
10m Sprint	___ s	___ s	- __
30m Fly Sprint	___ s	___ s	- __
5-10-5 Shuttle	___ s	___ s	- __

RSI	___	___	+ __
Copenhagen L / R	___ / ___	___ / ___	+ __

— BLOCK ZERO THREE 03 · SPEED CONVERSION

03

WEEKS

09–12 / 16 SESSIONS

FOCUS

REACTIVE PLYOS · MAX VELOCITY · REACTIVE AGILITY

EQUIPMENT

BW + BANDS

POWER REALIZATION.

“Express the work. On purpose.”

Block 3 is where the work converts into hockey speed. We move into reactive and shock plyometrics — depth jumps, continuous hurdle hops, Heiden max lateral bounds. These are the highest-intensity plyos in the program and the most demanding on your nervous system.

Sprint work converts to maximum velocity — 30m flys with 20m run-ins — and change-of-direction work via the 5-10-5 pro-agility plus reactive 4-cone mirror drills. This is hockey speed: not just fast in a straight line, but fast at reading and reacting under fatigue.

Energy system work matches the actual shift demands of a hockey game: 45 to 90 second high-intensity efforts with progressively shorter recovery. By Week 11, the work-to-rest ratio matches what you'll face in the third period of a tight game. Week 12 includes a 3 to 5 day taper.

— BLOCK FOCUS

Reactive/shock plyos. Max velocity + reactive COD. Complex training. Alactic-aerobic shift simulation. Week 12 = taper + final combine.

09

— FIRST WEEK OF THE BLOCK.

WEEK 09

POWER REALIZATION

DAYS 1 & 2

Reactive plyos begin. Depth jumps. Repeat bounds. The most demanding plyos in the program.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER • 8 MIN

01 HIGH-LOW POGO COMBO

5 low + 5 high, alternate

3 × 10

REACTIVE • REST 60S

02 DEPTH DROP — STICK

absorb fast, freeze

3 × 5

REACTIVE PREP • REST 60S

— POWER • 24 MIN — REACTIVE

03 DEPTH JUMP (LOW BOX)

minimum contact, max height

4 × 4

MAX EFFORT • REST 90S

04 HURDLE HOPS — CONTINUOUS

low hurdles, repeat bouncing

4 × 6

END OF WEEK 12 · THE COMBINE

FINAL combine.

Twelve weeks of work. Forty-eight sessions. This is the final combine. Same seven tests as Week 0. Full warm-up. Full rest between tests. Give everything you have. Then compare across the entire program.

- 01

VERTICAL JUMP
CMJ. 3 attempts. Best counts.
- 02

BROAD JUMP — MAX
Stick landing. 3 attempts. Best counts.
- 03

10M SPRINT
2-point start. 2 attempts. Best time.
- 04

30M FLY SPRINT
20m run-in, 10m timed. Best of 3.
- 05

5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 06

SL BROAD JUMP SYMMETRY
3 ea leg. Best counts. L:R ratio.
- 07

RSI — DROP JUMP
30cm box. Jump height / contact time.
- 08

COPENHAGEN — MAX HOLD
Long-lever. Both sides.

FINAL COMBINE SCORECARD			VS WEEK 08
TEST	WEEK 8	WEEK 12	CHANGE
Vertical Jump	___ cm	___ cm	+ __
Broad Jump	___ cm	___ cm	+ __
10m Sprint	___ s	___ s	- __
30m Fly Sprint	___ s	___ s	- __
5-10-5 Shuttle	___ s	___ s	- __
SL Broad Jump L / R	___ / ___	___ / ___	__ %
RSI	___	___	+ __
Copenhagen L / R	___ / ___	___ / ___	+ __

PRE VS POST / THE PROOF

YOU VS
you.

Week 0 vs Week 12. Same athlete. Twelve weeks apart. Forty-eight structured training sessions. This is the proof.

PRE VS POST — THE 12-WEEK SCORECARD				WEEK 0 → WEEK 12
TEST	WEEK 0	WEEK 12	CHANGE	% GAIN
Vertical Jump	___ cm	___ cm	+ ___	+ ___%
Broad Jump	___ cm	___ cm	+ ___	+ ___%
10m Sprint	___ s	___ s	- ___	- ___%
30m Fly Sprint	___ s	___ s	- ___	- ___%
5-10-5	___ s	___ s	- ___	- ___%
SL Symmetry	___ %	___ %	___	___
RSI	___	___	+ ___	+ ___%
Copenhagen	___ s	___ s	+ ___	+ ___%

— WHAT THE NUMBERS MEAN

A 5cm vertical jump gain is significant. A 10cm broad jump gain is substantial. A 0.20s drop on 10m sprint is the difference between winning a puck race and losing one. **You did this. Nobody did it for you.** Now do another block.

“The players who train smart in their off-seasons *are the players who play in the seasons that matter.*”

— EXERCISE GLOSSARY · PART ONE

PLYOMETRICS & *speed.*

Brief technical reference for every plyometric, speed, and sprint exercise in the program. Read this once. Refer back when an exercise feels unfamiliar.

— PLYOMETRICS · EXTENSIVE

POGO HOPS

Stiff-ankle bounce in place. Minimal knee bend. Quick ground contact. Tendon stiffness. *"Ground is hot."*

ANKLE HOP STICK

Pogo, stick the landing 2 sec. Absorption + bilateral landing.

BW SQUAT JUMP

Quarter-squat down, vertical jump max height. Soft landing. Reset each rep.

BROAD JUMP — STICK

Two-foot horizontal jump for distance. Stick landing. Don't fall forward.

DROP SQUAT

Fast drop into quarter-squat. No jump. Teaches absorption.

— PLYOMETRICS · INTENSIVE

CONTINUOUS BROAD JUMP

3 jumps no reset. Each landing flows into next jump. High elastic.

LATERAL BOUND — STICK / CONTINUOUS

Push off one leg, land on the other laterally. Hockey-relevant.

SKATER HOP

Diagonal forward bound, mimicking a skating stride. Land outside foot, drive off it.

DEPTH DROP (LOW BOX)

Step off low box (15-30cm), absorb in quarter squat. No jump. Reactive prep.

BANDED LOADED JUMP

Heavy band over shoulders, vertical jump. Trains rapid force under load. Contrast pair with unloaded jump.

— PLYOMETRICS · REACTIVE

DEPTH JUMP (LOW BOX)

Drop off low box, immediately rebound to max vertical. Minimum ground-contact. Highest-intensity plyo.

REPEAT BROAD JUMP

5 broad jumps continuous, walk back, repeat. Combines alactic power + reactive strength.

CONTRAST JUMP

3 banded loaded jumps + 3 unloaded jumps. Trains body to express force after heavy load.

LATERAL DEPTH DROP TO BOUND

Step laterally off low box, absorb, then explode laterally. Block 3 only. Highest hockey-relevance.

— SPEED & SPRINT

WALL DRIVE

Arms on wall, lean forward. Drive knee up, hold 5s. First-step acceleration mechanics.

FALLING START SPRINT

Lean forward until you have to step, then sprint 10m. Natural forward angle of acceleration.

BAND-RESISTED SPRINT

Partner holds heavy band at waist as you sprint. Drives stronger push-off mechanics. 10m only.

A-SKIP / B-SKIP

Bouncy, tall skipping pattern that ingrains running mechanics. Knee drive (A), thigh extension (B).

30M FLY SPRINT

20m run-in to reach max velocity, then 10m at full speed. Block 3 max velocity work.

5-10-5 PRO-AGILITY

Sprint 5m right, 10m left, 5m right. Standard hockey-combine COD test. Plant hard, change direction explosively.

— EXERCISE GLOSSARY · PART TWO

STRENGTH & *core.*

— LOWER STRENGTH

REAR-FOOT ELEVATED SPLIT SQUAT

Rear foot on bench, front knee tracks over toes. Single-leg unilateral hammer. Hockey gold.

BANDED FRONT SQUAT

Band over shoulders, hands hold band high on chest. Provides progressive resistance at top.

BANDED RDL

Stand on band, hold ends. Hinge with hips back, soft knees. Posterior chain bilateral.

SINGLE-LEG RDL (BANDED)

Stand on band with one foot, balance on the other leg, hinge. Hamstring + glute + balance.

COSSACK SQUAT

Wide stance. Shift weight over one leg, sink deep, opposite leg stays straight. Adductor + mobility.

LATERAL LUNGE (BANDED)

Step wide, sit into lead hip. Adductor eccentric loaded. Drive back to start.

— ADDUCTOR / GROIN

COPENHAGEN PLANK — SHORT

Side plank with top knee on bench (short lever). Hips lifted. Adductor isometric. Hockey durability essential.

COPENHAGEN PLANK — LONG

Top foot on bench (long lever). Much harder. Block 2+ only after mastering short version.

BANDED STANDING ADDUCTION

Band attached lateral to standing leg. Pull leg across midline. Slow tempo. Adductor concentric.

— UPPER STRENGTH

PUSH-UP (TEMPO / DEFICIT / ARCHER)

Standard, hands elevated for deficit (more ROM), or shifted to one side for archer (unilateral emphasis).

PLYO / CLAP PUSH-UP

Push hard enough that hands leave the ground. Plyo = hands return; clap = clap mid-air. Prereqs apply.

BANDED ROW (SEATED / STANDING)

Anchor band, sit or stand, pull to ribs. Squeeze shoulder blades. Heavy band as you progress.

BANDED CHEST PRESS

Anchor band behind you, press forward. Variable tension matches force-velocity profile of pressing.

DEAD HANG

Hang from pull-up bar, shoulders active. Grip + decompression. Hockey grip and forearm essential.

— CORE / ANTI-ROTATION

PALLOF PRESS

Heavy band perpendicular to body. Press arms straight out. Resist the rotation pulling you sideways.

BANDED CHOP / LIFT

High-to-low (chop) or low-to-high (lift) diagonal motion. Hips lead, arms follow. Rotational power.

HOLLOW HOLD / ROCK

Small "banana" shape. Lower back glued to floor. Anti-extension core. Gold for posture and shot power.

DRAGON FLAG NEGATIVE

Lie back, lift legs straight up, lower slowly while staying straight. Advanced anti-extension. Block 3.

— PROGRESSION / REGRESSION LIBRARY

SCALE UP. SCALE *down.*

Within an age range of 15-18, athletes span a huge spread of training ages and readiness. For every main exercise, this library gives you a regression (easier) and progression (harder). If a movement breaks down, regress it. If it feels easy, progress it. Stay clean.

09 — AGE SCALING / TRAIN FOR YOUR ATHLETIC AGE

SCALE FOR YOUR *decade.*

A 22-year-old defenseman and a 36-year-old beer-league veteran can run the same program — they just can't run it the same way. The structure stays. The volume, recovery, and impact stress scale. Find your sub-group below and follow the modifications consistently. No half-measures, no ego.

19—25

HIGH TOLERANCE

Run the program as written. Your recovery capacity is your superpower at this age — exploit it. You can hit Week 3 peak volumes hard and bounce back inside 48 hours.

- + Full prescribed volume — every set, every rep, every contact
- + 48h between same-day-type sessions is sufficient
- + Push hard in Week 3 of each block
- + Aggressive Week 12 taper not required — light deload OK
- + You can add a 5th session if structured (light tissue/mobility)

26—32

MODERATE

Program as written but pay closer attention to deload weeks. Stress responds differently here than at 22 — sleep, life stress, and training stress all compound now.

- + Full prescribed volume — but respect deload weeks fully
- + 48h between same-day-type. 72h preferred if you slept under 7h
- + Track resting heart rate in the morning — 10+ bpm jump = scale back that day
- + Tissue quality work non-negotiable (foam roll, mobility, hip/groin work)
- + Cap contrast complex at 4 working sets instead of 5 in Week 3 peaks

33—39

MANAGED LOADING

Read this page before Week 1. The structure works for you exactly as it works for the 22-year-old — but ignored, the impact and eccentric demands become injury risk. Follow these modifications consistently.

- + **PLYO VOLUME:** reduce by 25–30% on all reactive plyos — depth jumps, hurdle hops, repeat bounds
- + **RECOVERY:** 72h between high-CNS sessions (Day 1, Day 3). 48h minimum for Day 2 + Day 4
- + **30M FLY SPRINT:** reduce to 20m fly if any hamstring history. Always 2 progressive warm-up sprints first
- + **DEPTH JUMPS:** drop box height to 20cm max. Master the depth drop before progressing to jump
- + **ECCENTRIC TEMPO LOADS:** reduce eccentric phase by 1 second on all 3-sec down loads in Block 1
- + **HEIDEN:** stick the landing every rep — never continuous bounds. Drop reps by 1 set
- + **TISSUE WORK:** 5 min mobility/soft-tissue every session, in addition to RAMP and cool-down
- + **TAPER:** aggressive 5-day taper in Week 12 — drop volume 50%, intent stays max
- + **DAILY CHECK:** resting HR, sleep hours, joint feel — if 2 of 3 are red, swap planned session for tissue/aerobic day

— THE PRINCIPLE BEHIND THE MODIFICATIONS

After 33, connective tissue recovers more slowly than muscle. Your strength capacity is unchanged or even higher than at 25 — but the soft tissue that connects bone to bone needs more time to bounce back from impact and eccentric stress. The modifications above protect tendons, fascia, and joints without sacrificing the training stimulus. **Train smarter at 35 than you did at 22, and you'll skate at 40 the way you skated at 25.**

10 — RECOVERY · THE OTHER HALF OF TRAINING

YOU GROW WHEN YOU *recover*.

Training creates the stimulus. Recovery is where the actual adaptation happens. Get the three pillars right and the program works better than you expect. Get one of them wrong and the program gets harder than it has to be — and you stop adapting.

SLEEP	FUEL	WATER
8–10	1.6–2.0	3L+
HOURS / NIGHT	G PROTEIN / KG BODYWEIGHT	PER DAY · MORE IF HOT
At 15–18, you're still growing — bone density, muscle, neural connections all consolidate during sleep. Athletes who sleep less than 8 hours/night recover measurably worse, adapt less, and get injured more often.	Protein at every meal — palm-sized portion minimum. 30g of protein within 60 minutes after every session. Carbs for fuel around training. Vegetables for everything else your body needs to use what you eat.	A 2% drop in hydration drops jump height, sprint speed, and decision speed. Drink half a litre on waking. Sip through training. Pee should be pale yellow. Add electrolytes in heat or after long sessions.
+ Same sleep/wake time every night — including weekends	+ 30g protein at every meal — chicken, fish, eggs, dairy	+ 500ml water on waking, before anything else
+ No screens 30 min before bed — protect melatonin	+ Carbs around training (rice, pasta, oats, fruit)	+ Sip steadily through every training session
+ Cool, dark, quiet room — 18–20°C optimal	+ Half plate vegetables at lunch and dinner	+ Add electrolytes in heat or after Day 4
+ Sunlight in your eyes within an hour of waking	+ Cut soda, energy drinks, and processed sugar	+ Pee should be pale yellow, not clear, not dark

— SIGNS OF OVERTRAINING (PULL BACK IF YOU SEE THESE)

11 — MINDSET / WHAT SEPARATES THE PLAYERS WHO MAKE IT

THE *rules.*

Twelve weeks of structured off-season training is hard. Most kids your age won't do it. The ones who do — who show up four times a week for twelve straight weeks, who treat every rep like it matters — those are the kids you'll be playing alongside at the next level.

These aren't motivational quotes. These are the operating rules every player I've coached at junior, college, and national-team level lives by.

01 SHOW UP ANYWAY

The hardest sessions to start are the ones you don't want to do. Those are the ones that count most. Talent is showing up tired.

02 TRUST THE PROCESS

Some weeks you'll feel like you're getting worse. The numbers at the next test will tell the real story. The body adapts on its schedule, not yours.

03 DETAIL OBSESSED

A clean rep done 48 times beats a sloppy rep done 480 times. Quality is what separates elite athletes in the long run.

04 COMPETE WITH YESTERDAY

Don't compare to other players on Instagram. Compare to the version of yourself from one block ago. That's the only comparison that matters.

05 FALL IN LOVE WITH THE WORK

The players who go furthest aren't the ones who love the games most. They're the ones who love the training. Find the part of this you love. Lean into it.

"The kids who show up four times a week for twelve weeks in their off-seasons are the kids who play in the seasons that matter."

12 — ABOUT THE COACH

EDU	M.ED. SPORT SCIENCE
EXP	10+ YEARS COACHING
ROLES	HOCKEY PERFORMANCE COACH
TEACHES	PE & SPORT SCIENCE
BRAND	FOUNDER, ELITE HOCKEY DRILLS

— FROM THE COACH

COACH DAVID CIBOCH

**M.ED. SPORT SCIENCE / S&C / NATIONAL TEAM
COACH**

I'm a sport-science coach who has spent the last decade working with hockey players from grassroots through national-team level — including head S&C work with the UAE National Ice Hockey Team. I also work as a Physical Education and Sport Science teacher.

This program is the off-season plan I build for the players I coach in person. Block periodization, hockey-specific transfer, no garbage volume, no fluff. Bodyweight and bands only because those are the limits I work within when I'm building athletes who don't have access to a high-performance facility.

If you take it seriously — four sessions a week, twelve weeks straight, the protocols as written — you'll show up to camp measurably faster, more powerful, and harder to play against. That's the standard.

“The players who train smart between seasons are the players who decide what happens during the seasons.”

— COACH DAVID

[@ELITE_HOCKEY_DRILLS](#) / [ELITEHOCKEYDRILLS.COM](#)

— THE NEXT CHAPTER

YOU FINISHED TWELVE WEEKS. *what's next?*

In-season strength maintenance. Pre-season power retention. Position-specific programming. The work continues all year. Off-season is where you build the engine. In-season is where you protect it.

IN-SEASON MAINTENANCE PROGRAM — COMING NEXT

Two sessions per week. 35 minutes each. Maintains the power and strength you built across these twelve weeks without interfering with on-ice performance. Built for the long competitive season ahead.

COMING SOON · THE ELITE HOCKEY DRILLS APP

228+ hockey-specific exercises across 15 categories. Full structured programs. Video demonstrations for every exercise. Progress tracking. Built specifically for hockey players. Founders pricing available on the waitlist.

*“Be the first to know when the app drops.
Weekly drills, coaching breakdowns, and behind-the-scenes
content.”*
