

POWER & *speed.*

The complete twelve-week off-season program purpose-built for masters hockey athletes — 40+ across the spectrum from beer-league to competitive masters tournaments. Block periodization, masters-paced. Tendon preservation. Sub-maximal testing. Bands and bodyweight only. **No depth jumps. No max sprints. Quality over volume, always.**

01 — WELCOME / READ THIS FIRST

TWELVE WEEKS OF SMART *work.*

This is not a junior program scaled down. This is a real off-season power and speed plan purpose-built for masters hockey players — athletes 40+ who still want to skate hard, hit harder, and recover from games inside a week. Twelve weeks. Four sessions a week (or three — alternative provided for every block). Sixty to seventy-five minutes each, including a twelve-minute warm-up that's longer than most programs put together.

The philosophy is straightforward: **quality outranks volume, always.** Tendon health, joint preservation, and movement quality come before performance metrics. The biggest mistake in masters hockey training is treating "plyometrics" and "sprints" as monolithic and copying a junior program. We don't do that here.

So: **No depth jumps above 30cm. No shock plyos. No repeat-bound methods. No max-effort sprints. No 1RM testing.** Low-amplitude reactive work (pogos, ankle hops, stick landings) is the central tool for fighting age-related power loss — high-yield, low-cost. Sprint volume is capped weekly. All sprints on grass. All sets terminate on the first drop in quality.

The plan is three four-week blocks. **Re-acquisition. Strength + Power. Realization.** Block 1 wakes the body up — mobility, glute and scap activation, tendon stiffness, tempo strength. No sprinting in Weeks 1 or 2. Sub-maximal accel introduced Week 3. Block 2 builds banded strength heavier; moderate plyos and resisted accel enter. Block 3 converts to flying short-segment speed and reactive change-of-direction work.

The training plan is half the program. The other half is daily readiness, sleep, protein, hydration, tissue work, and stress management — programmed explicitly, not appended. Read pages 6 and 10 before Week 1.

If you follow this plan for twelve weeks the way it's written — including the deload weeks, the readiness checks, and the quality cutoff rule — you'll come into the season measurably more powerful, more durable, and harder to play against. And your joints, hips, and groin will thank you in season three, season five, season ten.

— FROM THE COACH

FOUNDER, ELITE HOCKEY DRILLS

**Coach
David**

02 — THE METHOD / WHY THIS WORKS

POWER PRESERVATION, JOINT *preservation.*

After 40, the central training priority isn't strength alone — it's **power preservation**. The neural and tendinous qualities that let you accelerate, change direction, and recover between shifts decline faster than raw strength does. Type-II fiber atrophy, declining tendon compliance, and reduced motor-unit recruitment all hit power output specifically.

The good news: low-amplitude reactive work — pogos, ankle hops, line hops, sub-maximal jumps with stick landings — is among the highest-yield interventions for masters athletes. It restores tendon stiffness, preserves motor-unit recruitment, and costs almost nothing in joint stress. It belongs in every session.

The bad news: traditional high-impact methods — depth jumps, repeat bounds, max-velocity sprinting — have an unfavorable injury-to-adaptation ratio at 40+. The hamstring strain you don't get during a max sprint is worth more than the 0.05 seconds you might have gained from doing it.

Strength remains the foundation. Banded and bodyweight strength with controlled eccentric tempos and isometric pauses builds the durable, repeatable strength that masters skating demands.

“The hamstring you don't pull is worth more than the 0.05 seconds you might have gained. Train smart enough to still be playing at 60.”

01

QUALITY OUTRANKS VOLUME

Every set is terminated on the first drop in quality. A clean rep done five times beats a sloppy rep done fifteen. Always.

02

CAPS ARE NOT SUGGESTIONS

Ground contacts and sprint distance have explicit weekly caps. You don't exceed them. The caps are tighter than what felt easy at 25 — and that's the point.

03

READINESS GOVERNS THE DAY

Daily 1-10 readiness check before every session. Auto-regulation rules are explicit. $\geq 8 \rightarrow$ train as written. 5-7 $\rightarrow$ reduce plyo/sprint 30-50%. $\leq 4 \rightarrow$ mobility, breathing, light aerobic only.

03 — THE ROADMAP / WHERE WE'RE GOING

THREE BLOCKS. MASTERS-*paced.*

Three four-week blocks. Each block has one job. Each block ends with a deload week and a sub-maximal mid-block test. The whole twelve weeks ends with a final combine and a 3–5 day taper. Hard caps on ground contacts and sprint distance every block — these are non-negotiable.

THE WEEKLY RHYTHM — 4-DAY VERSION

DAY 1

Lower body power +
posterior chain

DAY 2

Upper body power + anti-
rotation / rotational core

DAY 3

Lateral power + speed/
agility + adductor

DAY 4

Full-body power + energy
systems

SPREAD: MON / TUE / THU / SAT. MIN 72H BETWEEN DAY 1 AND DAY 3. 3-SESSION ALTERNATIVE: SEE PAGES 13, 24, 35.

01

RE-ACQUISITION

WEEKS 01–04 · TISSUE PREP + MOVEMENT

MOBILITY · ACTIVATION · TENDON STIFFNESS

GC CAP: 60 SPRINT: 0M (W1-2) / 100M (W3-4)

“First, we wake the body up. Then we earn the right to train.”

02

STRENGTH + POWER

WEEKS 05–08 · SUBMAXIMAL POWER

BANDED STRENGTH · ACCEL · ROTATIONAL

GC CAP: 80 SPRINT: 200M

“Strength is the foundation of masters power. Build the foundation.”

03

REALIZATION

WEEKS 09–12 · SPEED CONVERSION

FLYING SPEED · REACTIVE COD · COMPLEX

GC CAP: 100 SPRINT: 300M

04 — HOW TO USE THIS PROGRAM

SIX BLOCKS EVERY *session.*

Every session — every one of the forty-eight across the program — follows the same six-block architecture. The warm-up is longer than you're used to. The cool-down is longer than you've ever done. **Both are non-negotiable in full.** They're not the price you pay for the workout — they're the reason this program works at 40+ without breaking you down.

01	04
EXTENDED RAMP · 12–15 MIN	STRENGTH · 15–20 MIN
Raise, Activate, Mobilize, Potentiate. Hip 90/90, adductor rockers, t-spine openers, ankle dorsiflexion, glute bridging, scap pull-aparts, banded cuff work. See page 9.	Bodyweight + band strength. Unilateral bias. Controlled eccentrics. Isometric pauses. Adductor work in most sessions.
02	05
CNS PRIMER · 5–8 MIN	ENERGY SYSTEM · 8–12 MIN
Low-amplitude reactive work — pogos, ankle hops, line hops. Quality over volume. Tendon stiffness for the masters athlete.	Zone 2 (Block 1), alactic (Block 2), alactic-aerobic shift simulation (Block 3). Masters-realistic recovery ratios.
03	06
POWER / SPEED · 12–18 MIN	EXTENDED COOL-DOWN · 5–8 MIN
Sub-maximal intent. Stick the landings. Full rest between sets. Quality cutoff — any drop in speed/jump quality ends the set.	Nasal-breathing parasympathetic down-regulation, hip / groin / low-back mobility flow, optional soft-tissue. See page 9.
HOW EACH EXERCISE READS	
01 RFE SPLIT SQUAT — PAUSE	THE EXERCISE
3 × 8 BOTH SIDES	SETS × REPS
3210 · RPE 8 · REST 90S	TEMPO · BAND/RPE · REST

05 — THE RULES / OPERATING PRINCIPLES

EIGHT NON-NEGOTIABLE *rules.*

These eight rules govern the entire program. Read them once. Refer back any time something feels off. Following them is what separates this program — purpose-built for masters athletes — from a generic plan that grinds you into the ground.

01 PAIN IS A STOP SIGNAL

Pain is never "push through" in this program. Pain is information — your body telling you something needs attention. Stop the set. Regress the movement. Take the session as mobility/breathing if necessary. The next forty years of hockey depend on it.

02 QUALITY CUTOFF EVERY SET

The moment a rep is slower, sloppier, or less clean than the previous one — the set ends. No "one more." This is the single most important rule for protecting joints and tendons. Quality outranks volume always.

03 NO SHOCK PLYOS · EVER

No depth jumps from above 30cm. No repeat-bound methods. No high-amplitude single-leg reactive work. Low-amplitude reactive (pogos, stick landings) is the masters tool. Anyone telling you to do shock plyos at 40+ hasn't read the literature.

04 SUB-MAXIMAL SPRINTS ONLY

Sprint work is the highest hamstring injury risk activity in masters athletes. All sprints sub-maximal (RPE 7-8, not 10). All on grass — not asphalt. All terminated on the first quality drop. No max-effort sprint testing ever.

05 NO SPRINTING WEEKS 1-2

Block 1 Weeks 1 and 2 contain sprint mechanics only — wall drives, A-skips, B-skips. No actual sprints. Sub-maximal accelerations introduced Week 3. This rule protects you from the most common masters injury — the early off-season hamstring strain.

06 RESPECT THE CAPS

Ground contacts capped weekly: 60 (Block 1), 80 (Block 2), 100 (Block 3). Sprint distance capped weekly: 0m (W1-2), 100m (W3-4), 200m (Block 2), 300m (Block 3). You don't exceed them. These aren't suggestions.

07 READINESS GOVERNS THE DAY

Daily 1-10 readiness check before every session. ≥8 → train as written. 5-7 → reduce plyo and sprint volume by 30-50%, strength as written. ≤4 → mobility, breathing, light aerobic only. Full protocol page 10.

08 DELOAD WEEKS ARE MANDATORY

Week 4 = 50% volume. Week 8 = 60% volume. Week 12 = 3-5 day taper. Deload weeks are not optional — they're where adaptation consolidates. The masters athlete who skips deloads is the masters athlete who breaks down in November.

06 — WHAT YOU'LL NEED

THE *kit.*

No barbells. No dumbbells. No plates. No gym membership. This program is built around bodyweight and bands because bands give you the variable tension and explosive overload that's actually most relevant to hockey — and they cost less than a tank of gas.

ITEM 01

LOOP BAND SET

LIGHT · MEDIUM · HEAVY · ESSENTIAL

Three loop bands of different tensions — light, medium, heavy. Used for resisted sprints, banded squats and presses, glute activation, pull-up assistance, and contrast loading. The single most important piece of equipment in this program.

“Buy a set. You’ll use these for the next ten years.”

ITEM 02

PULL-UP BAR

DOORWAY OR FIXED · ESSENTIAL

A pull-up bar — doorway-mounted or fixed. Used for pulls, dead hangs, hanging knee raises, and grip work. Hockey players need pulling strength and grip — there's no good way to train them without one.

“Cheap doorway bars work. The fixed ones are better if you have the spot.”

ITEM 03

STURDY BOX OR BENCH

KNEE TO HIP HEIGHT · ESSENTIAL

A sturdy box or bench you can step on, jump off, and rest a foot on. Low height for depth drops. Knee height for step-ups and split squats. A stable patio step or coffee table works.

“Anything stable that won't collapse. Test it before you jump on it.”

ITEM 04

SPACE + TURF/ASPHALT

10M MIN STRAIGHT-LINE · ESSENTIAL

Open space — minimum 10 meters straight-line for sprints, 5 by 10 for the pro-agility. Outdoor turf or asphalt is ideal. For lateral work and bounding, a slightly bigger area helps.

“A driveway works. A turf field is better. Don't overthink it.”

OPTIONAL BUT HELPFUL Cones or markers for shuttle drills. A stopwatch or phone timer. A foam roller. A notebook for tracking your test results. Heavier tube-style band for stronger lifters in Block 2 and Block 3. A measuring tape for broad jump testing.

07 — BEFORE EVERY SESSION

THE EXTENDED RAMP WARM-UP.

Twelve to fifteen minutes. Non-negotiable in full. This is longer than most program warm-ups in total — and the reason this program works at 40+. You spent the day at a desk, in a car, on a flight. Your hips are tight, glutes asleep, t-spine locked. We undo all of it before we ask your body to be athletic.

R

RAISE · 2 MIN

Heart rate up. Body warm.

- Easy jog or jumping jacks — 60 seconds
- High knees in place — 30 seconds
- Butt kicks — 30 seconds

A

ACTIVATE · 4 MIN

Wake up glutes, scap, deep core.

- Glute bridge × 12 (2-sec pause top)
- Banded clamshell × 12 each side
- Banded lateral walk × 10 each way
- Band pull-apart × 15 (slow)
- Dead bug × 6 each (3-sec tempo)

M

MOBILIZE · 5 MIN

Hips, t-spine, ankle, shoulder.

- Hip 90/90 switch × 6 each way
- Adductor rocker × 8 (front + side rocks)
- World's greatest stretch × 4 each side
- T-spine open book × 10 each side
- Ankle dorsiflexion against wall × 8 each side
- Banded shoulder cuff rotation × 10 each way

P

POTENTIATE · 3 MIN

Wake the nervous system.

- Pogo hops × 10 (low amplitude)
- A-skip × 10 meters
- Bodyweight squat × 8 (slow down, fast up)

— MASTERS-SPECIFIC NOTE

08 — AFTER EVERY SESSION

THE EXTENDED cool-down.

Five to eight minutes. Non-negotiable. The cool-down is how you switch the nervous system off and start recovery the moment training ends. At 40+, this is where the program either accumulates or breaks down. Skip it and you arrive at the next session more tired, less mobile, more inflamed. Do it consistently and you adapt.

01 SLOW WALK + NASAL BREATHING · 90 SEC

LONG INHALE THROUGH THE NOSE, LONG EXHALE THROUGH THE NOSE.

“Tell the nervous system the hard work is over.”

Walking slowly with nasal-only breathing shifts you from sympathetic (training) to parasympathetic (recovery) within about a minute. Critical for adults with high baseline stress.

02 HIP / GROIN FLOW · 2 MIN

90/90 HIP STRETCH · FIGURE-4 · ADDUCTOR ROCKER · PIGEON — 30 SEC EACH SIDE

“Open the joints that hockey tightens.”

Hockey skating compresses the hip flexors and adductors. This flow undoes that pattern after every session. The masters athlete who does this consistently has noticeably better skating posture and stride length.

03 LOW-BACK + T-SPINE DECOMPRESSION · 90 SEC

CAT-COW × 8 · SUPINE SPINAL TWIST 30 SEC EACH SIDE · CHILD'S POSE 60 SEC

“Unload the spine.”

Spinal decompression after loaded work clears the disc compression that accumulates through any training session. The masters athlete with a cranky low back lives or dies by this two-minute flow.

04 LEGS UP THE WALL + 4-6 BREATH · 90-120 SEC

LIE ON BACK. LEGS STRAIGHT UP. INHALE 4 SEC, EXHALE 6 SEC. REPEAT 8-12 CYCLES.

“Heavy legs. Quiet mind.”

Where the work locks in. Circulation restored. Nervous system fully down-regulated. The next session starts here, not at the next RAMP.

— OPTIONAL · TISSUE WORK

If you have a foam roller or lacrosse ball: 2-3 minutes on quads, glutes, t-spine after the cool-down (NOT before training). Not for “breaking down knots” — for restoring tissue glide. Avoid rolling directly on bone or joints.

09 — BEFORE EVERY SESSION / READINESS

DAILY *readiness* CHECK.

Before every session, take 30 seconds. Score yourself 1-10 across four signals. Use the lowest of the four. The number governs the day. **Auto-regulation isn't optional — it's what makes this program safe and sustainable at 40+.**

01 SLEEP

9-10 → 8+ hours, woke rested · 6-8 → 6-7 hours, OK · 3-5 → under 6 hours, woke tired · 1-2 → barely slept

02 SORENESS / JOINT FEEL

9-10 → no soreness, joints move well · 6-8 → minor stiffness, fades after RAMP · 3-5 → persistent soreness past 48h · 1-2 → joint pain, swelling, or stiffness past 72h

03 MOOD / DRIVE

9-10 → motivated, looking forward to training · 6-8 → neutral, will get it done · 3-5 → dreading the session · 1-2 → no drive at all

04 LIFE STRESS / ENERGY

9-10 → calm, energy high · 6-8 → busy day but manageable · 3-5 → high stress at work / home · 1-2 → crisis mode

SCORE ≥ 8

TRAIN AS WRITTEN

Full session, full volume, full intent. This is the day to push to the upper end of the prescription.

SCORE 5-7

REDUCE 30-50%

Cut plyo volume and sprint volume by 30-50%. Strength as written but lower end of RPE range. RAMP and cool-down in full.

SCORE ≤ 4

MOBILITY + BREATH ONLY

Full RAMP. 10-15 min Zone 2 walk or bike. Breathwork. Tissue work. NO power, NO sprints, NO heavy strength. Reschedule the missed work into the next high-readiness day.

— SIGNS YOU NEED MORE THAN ONE LIGHT DAY

Three days in a row scoring ≤ 6. Sleep disruption past 5 nights. Resting HR consistently 10+ bpm above your baseline. Joint stiffness lasting past 48h. Mood drop you can't explain. → Take a 4-7 day deload regardless of where you are in the program. The program will still be there. Your body might not be if you ignore these signals.

10 — BEFORE YOU START / THE TESTING BATTERY

SEVEN TESTS. SUB-MAXIMAL *always.*

You test at Week 0, end of Block 1 (Week 4), end of Block 2 (Week 8), and end of Week 12. **Every test is sub-maximal, technique-controlled, or reactive — no max-effort sprints, no max vertical, no 1RM.** The same protocol every time so the numbers are comparable. Realistic masters expectation: power preservation and small gains, not junior-style PRs.

- | | |
|----|--|
| 01 | COUNTERMOVEMENT JUMP — AVG OF 3
Sub-max intent, focus on technique. 3 attempts, AVERAGE counts (not best). Expected: 2–5 cm gain across program. |
| 02 | BROAD JUMP — TECHNIQUE FOCUS
Sub-maximal intent, stick landing. 3 attempts, average counts. Expected: 10–15 cm gain. |
| 03 | 10M SPRINT — TIMED
2-point stance. 2 attempts at controlled high-but-not-max effort. Best counts. Expected: 0.05–0.15 sec faster. |
| 04 | 5-10-5 PRO-AGILITY
Standard shuttle. 2 attempts each direction. Best counts. Expected: 0.15–0.30 sec faster. |
| 05 | SINGLE-LEG BROAD JUMP — SYMMETRY
Sub-max intent, 3 attempts each leg. L:R ratio target: under 10% asymmetry by Week 12. |
| 06 | BANDED ROTATIONAL THROW (WALL)
Sub-max controlled throw. 3 each side. Distance or wall impact rating. Rotational power benchmark. |
| 07 | MOVEMENT SCREEN (4 SUB-CHECKS)
Overhead squat depth · Single-leg balance 30s ea · Thomas test self-check · Ankle dorsiflexion against wall. Pass/fail each. |

— PROTOCOL NOTES

Full 12–15 min RAMP before any test. Full rest between attempts. Test in same order, same surface (grass for sprints), same shoes every time. **Stop the test if any technique breaks down.** Better to have honest sub-max numbers than chase a PR with bad form.

— BLOCK ZERO ONE 01 · TISSUE PREP + MOVEMENT

01

WEEKS

01-04 / 16 SESSIONS

GC CAP / WK

60 CONTACTS

SPRINT CAP

0M (W1-2) / 100M (W3-4)

RE-ACQUISITION.

“First, we wake the body up. Then we earn the right to train.”

Block 1 is non-negotiable for the masters athlete. You don't skip it. You don't shorten it. Years of inconsistent training have left tight hips, dormant glutes, cranky scapulae, and tendons that have lost the stiffness that makes athletic movement feel effortless. We rebuild all of that first.

Every session in Block 1 opens with 12-15 minutes of dedicated mobility, glute and scap activation, and low-amplitude reactive pogos that wake up your tendons without taxing your joints. Strength is taught through controlled tempos and isometric pauses — building the kind of resilience that protects you when the season starts.

No sprinting in Weeks 1 or 2. None. Sprint mechanics only — wall drives, A-skips. Sub-maximal accelerations introduced Week 3. Adductor work starts at the very easiest Copenhagen — short lever, knees bent, low reps. Week 4 is a 50% volume deload before testing.

— BLOCK FOCUS

Mobility, activation, controlled tempo. Pogos for tendon stiffness. Copenhagen short-lever. NO sprinting W1-2. Pain = stop signal. Quality cutoff on every set.

BLOCK 01 · 3-SESSION ALTERNATIVE

THE 3-DAY version.

If you can't commit to four sessions a week — work, family, travel — here's how the 4-day plan folds into 3 sessions for Block 01. **Spread Mon / Wed / Fri or Tue / Thu / Sat. Minimum 48 hours between any two sessions.** Week 1-2: NO sprints in either version. Week 3-4: sub-max accel folded into Session 3.

SESSION 01

LOWER + STRENGTH + POSTERIOR

~70 MIN

— ENTIRE DAY 1

- All of Day 1 from the 4-day plan: pogos, ankle hops stick, BW squat jump sub-max, wall sit iso, split squat tempo, banded RDL, banded glute bridge, Copenhagen short, Zone 2 circuit.

— FOLD FROM DAY 4

- Add SL glute bridge from Day 4 strength block — only this single exercise.

SESSION 02

UPPER + ROTATIONAL CORE + ADDUCTOR

~65 MIN

— ENTIRE DAY 2

- All of Day 2 from the 4-day plan: pull-aparts, face pulls, explosive push-up, band chest pass, tempo push-up, banded row, Pallof, dead bug, dead hang, banded wrist.

— FOLD FROM DAY 3

- Add Copenhagen short-lever + banded hamstring slides from Day 3 adductor block.

SESSION 03

LATERAL + SPEED + ESD

~75 MIN

— ENTIRE DAY 3

- All of Day 3 power, speed/mechanics blocks: 90/90 switch, banded lateral walk, lateral hop stick, skater hop stick, wall drive, A-skip/B-skip. W3-4 add: falling start sub-max 10m.

— FOLD FROM DAY 4

- Add Zone 2 aerobic circuit from Day 4 ESD block (10-12 × 30s/30s).

— GENERAL RULES FOR THE 3-DAY VERSION

Extended RAMP (12-15 min) still non-negotiable. Extended cool-down (5-8 min) still non-negotiable. Quality cutoff on every set. Respect the same weekly caps as the 4-day version — even though you have fewer sessions, you do NOT compress 4 days of volume into 3. Cap = cap.

01

— FIRST WEEK OF THE BLOCK.

WEEK 01

RE-ACQUISITION

DAYS 1 & 2

Movement quality week. Every rep teaches your body the pattern. Don't chase fatigue.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 8 MIN — LOW-AMP REACTIVE

- 01 **POGO HOPS — SUB-MAX**
quiet, quick, ankles stiff
3 × 6
RPE 6 · REST 60S
- 02 **ANKLE HOP — STICK 2 SEC**
stick clean, no wobble
2 × 4
QUALITY · REST 60S

— POWER · 12 MIN — SUB-MAX

- 03 **BW SQUAT JUMP — SUB-MAX**
low amplitude, soft land
3 × 4
RPE 7 · REST 90S
- 04 **ISO WALL SIT**
thighs parallel, breathe
3 × 20S
ISOMETRIC · REST 90S

— STRENGTH · 18 MIN — TEMPO + ISO

- 05 **SPLIT SQUAT — TEMPO**
3-sec down, drive up
3 × 8 BOTH SIDES
3010 · RPE 6 · REST 90S
- 06 **BANDED RDL — TEMPO**
hips back, soft knees
3 × 10
3110 · MEDIUM BAND · REST 90S
- 07 **BANDED GLUTE BRIDGE — PAUSE**
2-sec pause top, drive heels
3 × 12
2212 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN — SHORT LEVER**
knees bent, top knee on bench
2 × 10S BOTH SIDES
ADDUCTOR · EASY START · REST 90S

— ESD · 12 MIN — ZONE 2 BASE

- 09 **TEMPO CIRCUIT**
smooth, nasal breathing
6 × 30S / 60S
RPE 5

~70 MIN

SEE GLOSSARY P.45

DAY 2

UPPER POWER + ANTI-ROTATION CORE

— PRIMER · 8 MIN — SCAP + CUFF

- 01 **BAND PULL-APART**
slow, full range, squeeze
3 × 12
LIGHT BAND · REST 60S
- 02 **BAND FACE PULL**
elbows high, external rotation
3 × 10
LIGHT BAND · REST 60S

— POWER · 10 MIN — SUB-MAX

- 03 **EXPLOSIVE PUSH-UP — HANDS DOWN**
fast up, hands stay grounded
3 × 5
RPE 7 · REST 90S
- 04 **BAND CHEST PASS — SEATED**
controlled, fast release
3 × 6
MEDIUM BAND · REST 90S

— STRENGTH · 18 MIN — TEMPO + PAUSE

- 05 **PUSH-UP — TEMPO 3010**
3-sec down, elbows 45°
3 × 8
3010 · RPE 7 · REST 90S
- 06 **BANDED ROW — SEATED**
elbows tight, squeeze blades
3 × 10
2012 · HEAVY BAND · REST 90S
- 07 **PALLOF PRESS — TALL KNEELING**
ribs down, resist rotation
3 × 8 BOTH SIDES
2110 · MEDIUM BAND · REST 90S
- 08 **DEAD BUG — TEMPO**
low back glued, slow control
3 × 8 BOTH SIDES
3010 · ANTI-EXTENSION · REST 90S

— ACCESSORY · 8 MIN — GRIP + SCAP

- 09 **DEAD HANG**
active shoulders, breathe
3 × 20S
GRIP · REST 60S
- 10 **BANDED WRIST WORK**
slow flex + extend, full ROM
2 × 12 BOTH SIDES WAY
LIGHT BAND · REST 60S

~65 MIN

— VOLUME BUILDS.
WEEK 02
RE-ACQUISITION

DAYS 1 & 2

Same patterns, slightly more volume. The tissues are adapting — give them work that lets them.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 8 MIN — LOW-AMP REACTIVE

- 01 **POGO HOPS — SUB-MAX**
quiet, quick, ankles stiff
3 × 8
RPE 6 · REST 60S
- 02 **ANKLE HOP — STICK 2 SEC**
stick clean, no wobble
2 × 5
QUALITY · REST 60S

— POWER · 12 MIN — SUB-MAX

- 03 **BW SQUAT JUMP — SUB-MAX**
low amplitude, soft land
3 × 5
RPE 7 · REST 90S
- 04 **ISO WALL SIT**
thighs parallel, breathe
3 × 30S
ISOMETRIC · REST 90S

— STRENGTH · 18 MIN — TEMPO + ISO

- 05 **SPLIT SQUAT — TEMPO**
3-sec down, drive up
3 × 10 BOTH SIDES
3010 · RPE 6 · REST 90S
- 06 **BANDED RDL — TEMPO**
hips back, soft knees
3 × 12
3110 · MEDIUM BAND · REST 90S
- 07 **BANDED GLUTE BRIDGE — PAUSE**
2-sec pause top, drive heels
3 × 15
2212 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN — SHORT LEVER**
knees bent, top knee on bench
2 × 15S BOTH SIDES
ADDUCTOR · EASY START · REST 90S

— ESD · 12 MIN — ZONE 2 BASE

- 09 **TEMPO CIRCUIT**
smooth, nasal breathing
8 × 30S / 60S
RPE 5

~70 MIN

SEE GLOSSARY P.45

DAY 2

UPPER POWER + ANTI-ROTATION CORE

— PRIMER · 8 MIN — SCAP + CUFF

- 01 **BAND PULL-APART**
slow, full range, squeeze
3 × 15
LIGHT BAND · REST 60S
- 02 **BAND FACE PULL**
elbows high, external rotation
3 × 12
LIGHT BAND · REST 60S

— POWER · 10 MIN — SUB-MAX

- 03 **EXPLOSIVE PUSH-UP — HANDS DOWN**
fast up, hands stay grounded
3 × 6
RPE 7 · REST 90S
- 04 **BAND CHEST PASS — SEATED**
controlled, fast release
3 × 8
MEDIUM BAND · REST 90S

— STRENGTH · 18 MIN — TEMPO + PAUSE

- 05 **PUSH-UP — TEMPO 3010**
3-sec down, elbows 45°
3 × 10
3010 · RPE 7 · REST 90S
- 06 **BANDED ROW — SEATED**
elbows tight, squeeze blades
3 × 12
2012 · HEAVY BAND · REST 90S
- 07 **PALLOF PRESS — TALL KNEELING**
ribs down, resist rotation
3 × 10 BOTH SIDES
2110 · MEDIUM BAND · REST 90S
- 08 **DEAD BUG — TEMPO**
low back glued, slow control
3 × 10 BOTH SIDES
3010 · ANTI-EXTENSION · REST 90S

— ACCESSORY · 8 MIN — GRIP + SCAP

- 09 **DEAD HANG**
active shoulders, breathe
3 × 25S
GRIP · REST 60S
- 10 **BANDED WRIST WORK**
slow flex + extend, full ROM
2 × 15 BOTH SIDES WAY
LIGHT BAND · REST 60S

~65 MIN

SEE GLOSSARY P.45

02

— VOLUME BUILDS.

WEEK 02

RE-ACQUISITION

DAYS 3 & 4 (CONT.)

DAY 3

LATERAL POWER + MECHANICS + ADDUCTOR

— PRIMER · 10 MIN — HIP + GLUTE

01 90/90 HIP SWITCH + REACH

deep rotation, slow flow
3 × 6 BOTH SIDES

MOBILITY · REST 60S

02 BANDED LATERAL WALK

knees over toes, low stance

3 × 12 BOTH SIDES WAY

MEDIUM BAND · REST 60S

— POWER · 12 MIN — LOW AMP STICK

03 LATERAL HOP — STICK 2 SEC

sub-max distance, freeze landing

3 × 4 BOTH SIDES

QUALITY · REST 90S

04 SKATER HOP — STICK 2 SEC

control on outside foot

3 × 4 BOTH SIDES

QUALITY · REST 90S

— SPEED · 15 MIN — MECHANICS THEN ACCEL

05 WALL DRIVE HOLD

drive knee up, straight body

3 × 6S BOTH SIDES

MECHANICS · REST FULL

06 A-SKIP + B-SKIP

tall, bouncy, mechanics only

3 × 20M BOTH SIDES

MECHANICS · REST FULL

07 FALLING START SPRINT 10M*

**W3-4 ONLY · sub-max, RPE 7*

NO SPRINTS

SUB-MAX · REST FULL

— ADDUCTOR · 10 MIN

08 COSSACK SQUAT — SHALLOW

shift weight, deep is optional

3 × 6 BOTH SIDES

3010 · ADDUCTOR · REST 60S

09 BANDED HAMSTRING SLIDES

heels slide, hips up

2 × 10

PREHAB · REST 60S

~70 MIN

SEE GLOSSARY P.45

DAY 4

FULL-BODY POWER + ZONE 2 ESD

— PRIMER · 8 MIN — MOVEMENT FLOW

01 BEAR CRAWL + CROCODILE

hips low, smooth tempo

3 × 10M BOTH SIDES

GENERAL PREP · REST 60S

02 INCHWORM TO PUSH-UP

whole body, slow

2 × 6

PREP · REST 60S

— POWER · 10 MIN — SUB-MAX COMPLEX

03 SQUAT TO BROAD JUMP — SUB-MAX

smooth, stick the landing

3 × 4

QUALITY · REST 90S

04 PUSH-UP TO REACH

push, reach hand to sky

3 × 5 BOTH SIDES

RPE 7 · REST 90S

— STRENGTH · 12 MIN

05 SINGLE-LEG GLUTE BRIDGE

band over hips, drive heel

3 × 10 BOTH SIDES

2012 · MEDIUM BAND · REST 90S

06 PALLOF PRESS — HALF KNEELING

resist the rotation pull

3 × 10 BOTH SIDES

2010 · MEDIUM BAND · REST 90S

— ESD · 15 MIN — ZONE 2

07 AEROBIC CIRCUIT

smooth, conversational pace

12 × 30S / 30S

RPE 5-6

~65 MIN

SEE GLOSSARY P.45

03

— PEAK VOLUME OF THE BLOCK.

WEEK 03
RE-ACQUISITION

DAYS 1 & 2

Peak volume of Block 1. Form has to stay clean even as the volume climbs.

DAY 1

LOWER POWER + POSTERIOR CHAIN

— PRIMER · 8 MIN — LOW-AMP REACTIVE

- 01 **POGO HOPS — SUB-MAX**
quiet, quick, ankles stiff
3 × 8
RPE 6 · REST 60S
- 02 **ANKLE HOP — STICK 2 SEC**
stick clean, no wobble
3 × 5
QUALITY · REST 60S

— POWER · 12 MIN — SUB-MAX

- 03 **BW SQUAT JUMP — SUB-MAX**
low amplitude, soft land
3 × 5
RPE 7 · REST 90S
- 04 **ISO WALL SIT**
thighs parallel, breathe
3 × 40S
ISOMETRIC · REST 90S

— STRENGTH · 18 MIN — TEMPO + ISO

- 05 **SPLIT SQUAT — TEMPO**
3-sec down, drive up
3 × 12 BOTH SIDES
3010 · RPE 6 · REST 90S
- 06 **BANDED RDL — TEMPO**
hips back, soft knees
3 × 12
3110 · MEDIUM BAND · REST 90S
- 07 **BANDED GLUTE BRIDGE — PAUSE**
2-sec pause top, drive heels
3 × 15
2212 · MEDIUM BAND · REST 90S
- 08 **COPENHAGEN — SHORT LEVER**
knees bent, top knee on bench

END OF BLOCK 01 · WEEK 04

MID-BLOCK

test one.

Four weeks in. Test today. You should see meaningful gains on Copenhagen plank, Pallof iso, and broad jump symmetry. Vertical jump and 10m sprint may move a little — they move more in Block 2.

- 01 CMJ — AVG OF 3
Sub-max, technique focus. Average counts.
- 02 BROAD JUMP — TECHNIQUE
Sub-max, stick landing. Average of 3.
- 03 10M SPRINT
Controlled, not max. 2 attempts. Best.
- 04 5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 05 SL BROAD JUMP SYMMETRY
3 ea leg sub-max. L:R ratio.
- 06 BANDED ROTATIONAL THROW
Sub-max, controlled. 3 each side.
- 07 MOVEMENT SCREEN
OH squat · SL balance · Thomas · ankle DF.

BLOCK 01 SCORECARD

— BLOCK ZERO TWO 02 · SUBMAXIMAL POWER

02

WEEKS

05-08 / 16 SESSIONS

GC CAP / WK

80 CONTACTS

SPRINT CAP

200M

STRENGTH + POWER.

*“Strength is the foundation of masters power.
Build the foundation.”*

Block 2 is where you become noticeably stronger and more powerful — without paying the joint cost of high-impact methods. Heavy banded strength work with eccentric tempos and isometric pauses drives the kind of strength that translates directly to masters skating: durable, controlled, repeatable.

Plyometrics step up to moderate intensity — broad jumps and lateral bounds with strict stick landings, sub-maximal squat jumps with quality cutoffs. No shock methods. No depth jumps from above 30cm. Quality is the absolute ceiling — you stop the set the moment the next rep won't be as clean as the last.

Sprint work introduces band-resisted accelerations and grass hill strides at moderate intent. **Rotational power enters the program** via banded chops and wall throws — capped at 2 sets per session. Week 8 is a 60% volume deload + mid-block test.

— BLOCK FOCUS

Banded strength heavier. Moderate plyos with STICK. Resisted accel + hill strides. Rotational power introduced. Sprint cap 200m/wk. Quality cutoff every set.

BLOCK 02 · 3-SESSION ALTERNATIVE

THE 3-DAY version.

If you can't commit to four sessions a week — work, family, travel — here's how the 4-day plan folds into 3 sessions for Block 02. **Spread Mon / Wed / Fri or Tue / Thu / Sat. Minimum 48 hours between any two sessions.** Sprint cap 200m/wk in both versions. Rotational power enters this block.

SESSION 01

LOWER + STRENGTH + POSTERIOR

~75 MIN

— ENTIRE DAY 1

- All of Day 1: double pogos, SL pogos sub-max, broad jump stick, BW squat jump, banded front squat tempo, SL RDL banded, Copenhagen long-lever start, sprint intervals 12s.

— FOLD FROM DAY 4

- Add banded squat tempo + broad jump unloaded from Day 4 power complex (contrast pair only).

SESSION 02

UPPER + ROTATIONAL CORE + ADDUCTOR

~70 MIN

— ENTIRE DAY 2

- All of Day 2: Y-T-W, plyo push-up hands-down, band rotational throw, deficit push-up, banded row standing, Pallof half-kneeling, banded chop, hollow hold, dead hang.

— FOLD FROM DAY 3

- Add Copenhagen long-lever + banded standing adduction from Day 3 adductor block.

SESSION 03

LATERAL + ACCEL + ESD

~75 MIN

— ENTIRE DAY 3

- All of Day 3 power + speed blocks: monster walk, Cossack flow, lateral bound stick, skater hop stick, band-resisted 10m, hill stride 15m. Respect 200m sprint cap.

— FOLD FROM DAY 4

- Add repeat efforts 15s alactic-aerobic from Day 4 ESD.

— GENERAL RULES FOR THE 3-DAY VERSION

Extended RAMP (12-15 min) still non-negotiable. Extended cool-down (5-8 min) still non-negotiable. Quality cutoff on every set. Respect the same weekly caps as the 4-day version — even though you have fewer sessions, you do NOT compress 4 days of volume into 3. Cap = cap.

05

— FIRST WEEK OF THE BLOCK.

WEEK 05

STRENGTH + POWER

DAYS 1 & 2

Intensive plyos begin. Every jump max effort. Every set with full recovery.

DAY 1

LOWER POWER + POSTERIOR CHAIN

End of Block 02 · Week 08

MID-BLOCK

test two.

Eight weeks in. The middle of the program. Vertical jump and broad jump usually take their first big step here. Acceleration sprints get faster. Lateral bound distances jump up. Compare against Block 1 test.

- 01

CMJ — AVG OF 3
Sub-max, technique focus. Average counts.
- 02

BROAD JUMP — TECHNIQUE
Sub-max, stick landing. Average of 3.
- 03

10M SPRINT
Controlled, not max. 2 attempts. Best.
- 04

5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 05

SL BROAD JUMP SYMMETRY
3 ea leg sub-max. L:R ratio.
- 06

BANDED ROTATIONAL THROW
Sub-max, controlled. 3 each side.
- 07

MOVEMENT SCREEN
OH squat · SL balance · Thomas · ankle DF.

300M

REALIZATION.

“Convert the work into hockey-relevant power.”

Block 3 converts the strength and power you built into hockey-relevant speed — without the joint cost of max-velocity sprinting. Flying 10m segments at high-but-not-max intent. Reactive 5-10-5 shuttles. Mirror drills with a partner. This is hockey-specific speed: not just fast in a straight line, but fast at reading and reacting.

Plyometrics stay capped at moderate intensity. Reactive lateral bounds, low box hop-ups (under 30cm), banded-iso to unloaded-jump contrast pairs. The contrast work primes the nervous system to express force fast after heavy load — without the joint and tendon stress of true shock plyometrics.

Energy system work simulates real shift demands: 45-60 second high-quality efforts with masters-realistic recovery. Week 12 includes a 3-5 day taper before the final combine. Volume drops sharply, quality intent stays.

— BLOCK FOCUS

Flying 10m sub-max. Reactive COD. Complex/contrast training. No depth jumps >30cm. Shift-simulation ESD. Week 12 = taper + final combine.

BLOCK 03 · 3-SESSION ALTERNATIVE

THE 3-DAY version.

If you can't commit to four sessions a week — work, family, travel — here's how the 4-day plan folds into 3 sessions for Block 03. **Spread Mon / Wed / Fri or Tue / Thu / Sat. Minimum 48 hours between any two sessions.** Sprint cap 300m/wk. Flying segments at high-but-not-max intent. Quality cutoff every set.

SESSION 01

LOWER + STRENGTH + POSTERIOR

~70 MIN

— ENTIRE DAY 1

- All of Day 1: high-low pogo combo, low box hop-up stick (under 30cm), broad jump stick, banded iso + jump contrast, RFE SS pause, SL RDL tempo, repeat efforts 30s grass.

— FOLD FROM DAY 4

- Add banded squat iso hold + unloaded squat jump from Day 4 contrast complex (replaces one of the contrast pairs above).

SESSION 02

UPPER + ROTATIONAL + CORE

~70 MIN

— ENTIRE DAY 2

- All of Day 2: band face pull, plyo push-up, band rotational throw, archer push-up, banded row pause, Pallof rotation hold, banded lift chop-up, hollow rock.

— FOLD FROM DAY 4

- Add band rotational scoop toss from Day 4 power complex.

SESSION 03

FLYING SPEED + REACTIVE + ADDUCTOR

~80 MIN

— ENTIRE DAY 3

- All of Day 3: A-skip/B-skip, banded lateral walk, continuous lateral bound sub-max, crossover bound stick, flying 10m, 5-10-5, reactive mirror, Copenhagen long, banded lateral lunge.

— FOLD FROM DAY 4

- Add repeat efforts 45-60s shift simulation from Day 4 ESD.

— GENERAL RULES FOR THE 3-DAY VERSION

Extended RAMP (12-15 min) still non-negotiable. Extended cool-down (5-8 min) still non-negotiable. Quality cutoff on every set. Respect the same weekly caps as the 4-day version — even though you have fewer sessions, you do NOT compress 4 days of volume into 3. Cap = cap.

09

— FIRST WEEK OF THE BLOCK.

WEEK 09
REALIZATION

DAYS 1 & 2

Reactive plyos begin. Depth jumps. Repeat bounds. The most demanding plyos in the program.

DAY 1

END OF WEEK 12 · THE COMBINE

FINAL combine.

Twelve weeks of work. Forty-eight sessions. This is the final combine. Same seven tests as Week 0. Full warm-up. Full rest between tests. Give everything you have. Then compare across the entire program.

- 01 CMJ — AVG OF 3
Sub-max, technique focus. Average counts.
- 02 BROAD JUMP — TECHNIQUE
Sub-max, stick landing. Average of 3.
- 03 10M SPRINT
Controlled, not max. 2 attempts. Best.
- 04 5-10-5 PRO-AGILITY
2 attempts each direction. Best counts.
- 05 SL BROAD JUMP SYMMETRY
3 ea leg sub-max. L:R ratio.
- 06 BANDED ROTATIONAL THROW
Sub-max, controlled. 3 each side.
- 07 MOVEMENT SCREEN
OH squat · SL balance · Thomas · ankle DF.

FINAL COMBINE SCORECARD			VS WEEK 08
TEST	WEEK 8	WEEK 12	CHANGE
CMJ (avg)	___ cm	___ cm	+ ___
Broad Jump (avg)	___ cm	___ cm	+ ___
10m Sprint	___ s	___ s	- ___
5-10-5 Shuttle	___ s	___ s	- ___
SL Broad L / R	___ / ___	___ / ___	___ %
Rotational Throw L / R	___ / ___	___ / ___	+ ___
Movement Screen (P/F)	___/4	___/4	+ ___

PRE VS POST / THE PROOF

YOU VS
you.

Week 0 vs Week 12. Same athlete. Twelve weeks apart. Forty-eight structured training sessions. This is the proof.

PRE VS POST — THE 12-WEEK SCORECARD				WEEK 0 → WEEK 12
TEST	WEEK 0	WEEK 12	CHANGE	% GAIN
CMJ (avg of 3)	___ cm	___ cm	+ __	+ __%
Broad Jump (avg)	___ cm	___ cm	+ __	+ __%
10m Sprint	___ s	___ s	- __	- __%
5-10-5 Shuttle	___ s	___ s	- __	- __%
SL Symmetry	___ %	___ %	___	___
Rotational Throw	___	___	+ __	+ __%
Movement Screen	___/4	___/4	+ __	___

— WHAT THE NUMBERS MEAN

A 5cm vertical jump gain is significant. A 10cm broad jump gain is substantial. A 0.20s drop on 10m sprint is the difference between winning a puck race and losing one. **You did this. Nobody did it for you.** Now do another block.

“The players who train smart in their off-seasons *are the players who play in the seasons that matter.*”

— EXERCISE GLOSSARY · PART ONE

PLYOMETRICS & *speed.*

Brief technical reference for every plyometric, speed, and sprint exercise in the program. Read this once. Refer back when an exercise feels unfamiliar.

— PLYOMETRICS · EXTENSIVE

POGO HOPS

Stiff-ankle bounce in place. Minimal knee bend. Quick ground contact. Tendon stiffness. "*Ground is hot.*"

ANKLE HOP STICK

Pogo, stick the landing 2 sec. Absorption + bilateral landing.

BW SQUAT JUMP

Quarter-squat down, vertical jump max height. Soft landing. Reset each rep.

BROAD JUMP — STICK

Two-foot horizontal jump for distance. Stick landing. Don't fall forward.

DROP SQUAT

Fast drop into quarter-squat. No jump. Teaches absorption.

— PLYOMETRICS · INTENSIVE

CONTINUOUS BROAD JUMP

3 jumps no reset. Each landing flows into next jump. High elastic.

LATERAL BOUND — STICK / CONTINUOUS

Push off one leg, land on the other laterally. Hockey-relevant.

SKATER HOP

Diagonal forward bound, mimicking a skating stride. Land outside foot, drive off it.

DEPTH DROP (LOW BOX)

Step off low box (15-30cm), absorb in quarter squat. No jump. Reactive prep.

BANDED LOADED JUMP

Heavy band over shoulders, vertical jump. Trains rapid force under load. Contrast pair with unloaded jump.

— PLYOMETRICS · REACTIVE

DEPTH JUMP (LOW BOX)

Drop off low box, immediately rebound to max vertical. Minimum ground-contact. Highest-intensity plyo.

REPEAT BROAD JUMP

5 broad jumps continuous, walk back, repeat. Combines alactic power + reactive strength.

CONTRAST JUMP

3 banded loaded jumps + 3 unloaded jumps. Trains body to express force after heavy load.

LATERAL DEPTH DROP TO BOUND

Step laterally off low box, absorb, then explode laterally. Block 3 only. Highest hockey-relevance.

— SPEED & SPRINT

WALL DRIVE

Arms on wall, lean forward. Drive knee up, hold 5s. First-step acceleration mechanics.

FALLING START SPRINT

Lean forward until you have to step, then sprint 10m. Natural forward angle of acceleration.

BAND-RESISTED SPRINT

Partner holds heavy band at waist as you sprint. Drives stronger push-off mechanics. 10m only.

A-SKIP / B-SKIP

Bouncy, tall skipping pattern that ingrains running mechanics. Knee drive (A), thigh extension (B).

30M FLY SPRINT

20m run-in to reach max velocity, then 10m at full speed. Block 3 max velocity work.

5-10-5 PRO-AGILITY

Sprint 5m right, 10m left, 5m right. Standard hockey-combine COD test. Plant hard, change direction explosively.

— EXERCISE GLOSSARY · PART TWO

STRENGTH & *core.*

— LOWER STRENGTH

REAR-FOOT ELEVATED SPLIT SQUAT

Rear foot on bench, front knee tracks over toes. Single-leg unilateral hammer. Hockey gold.

BANDED FRONT SQUAT

Band over shoulders, hands hold band high on chest. Provides progressive resistance at top.

BANDED RDL

Stand on band, hold ends. Hinge with hips back, soft knees. Posterior chain bilateral.

SINGLE-LEG RDL (BANDED)

Stand on band with one foot, balance on the other leg, hinge. Hamstring + glute + balance.

COSSACK SQUAT

Wide stance. Shift weight over one leg, sink deep, opposite leg stays straight. Adductor + mobility.

LATERAL LUNGE (BANDED)

Step wide, sit into lead hip. Adductor eccentric loaded. Drive back to start.

— ADDUCTOR / GROIN

COPENHAGEN PLANK — SHORT

Side plank with top knee on bench (short lever). Hips lifted. Adductor isometric. Hockey durability essential.

COPENHAGEN PLANK — LONG

Top foot on bench (long lever). Much harder. Block 2+ only after mastering short version.

BANDED STANDING ADDUCTION

Band attached lateral to standing leg. Pull leg across midline. Slow tempo. Adductor concentric.

— UPPER STRENGTH

PUSH-UP (TEMPO / DEFICIT / ARCHER)

Standard, hands elevated for deficit (more ROM), or shifted to one side for archer (unilateral emphasis).

PLYO / CLAP PUSH-UP

Push hard enough that hands leave the ground. Plyo = hands return; clap = clap mid-air. Prereqs apply.

BANDED ROW (SEATED / STANDING)

Anchor band, sit or stand, pull to ribs. Squeeze shoulder blades. Heavy band as you progress.

BANDED CHEST PRESS

Anchor band behind you, press forward. Variable tension matches force-velocity profile of pressing.

DEAD HANG

Hang from pull-up bar, shoulders active. Grip + decompression. Hockey grip and forearm essential.

— CORE / ANTI-ROTATION

PALLOF PRESS

Heavy band perpendicular to body. Press arms straight out. Resist the rotation pulling you sideways.

BANDED CHOP / LIFT

High-to-low (chop) or low-to-high (lift) diagonal motion. Hips lead, arms follow. Rotational power.

HOLLOW HOLD / ROCK

Small "banana" shape. Lower back glued to floor. Anti-extension core. Gold for posture and shot power.

DRAGON FLAG NEGATIVE

Lie back, lift legs straight up, lower slowly while staying straight. Advanced anti-extension. Block 3.

— PROGRESSION / REGRESSION LIBRARY

SCALE UP. SCALE *down.*

Within an age range of 15-18, athletes span a huge spread of training ages and readiness. For every main exercise, this library gives you a regression (easier) and progression (harder). If a movement breaks down, regress it. If it feels easy, progress it. Stay clean.

SQUAT JUMP REGRESSION BW DROP SQUAT (NO JUMP) PROGRESSION BANDED LOADED JUMP	PUSH-UP REGRESSION INCLINE PUSH-UP (HANDS ELEVATED) PROGRESSION DEFICIT PUSH-UP (HANDS ON BOOKS)

11 — RECOVERY · THE OTHER HALF OF TRAINING

YOU GROW WHEN YOU *recover*.

Training creates the stimulus. Recovery is where the actual adaptation happens. Get the three pillars right and the program works better than you expect. Get one of them wrong and the program gets harder than it has to be — and you stop adapting.

SLEEP	FUEL	WATER
8–10	1.6–2.0	3L+
HOURS / NIGHT	G PROTEIN / KG BODYWEIGHT	PER DAY · MORE IF HOT
At 15–18, you're still growing — bone density, muscle, neural connections all consolidate during sleep. Athletes who sleep less than 8 hours/night recover measurably worse, adapt less, and get injured more often.	Protein at every meal — palm-sized portion minimum. 30g of protein within 60 minutes after every session. Carbs for fuel around training. Vegetables for everything else your body needs to use what you eat.	A 2% drop in hydration drops jump height, sprint speed, and decision speed. Drink half a litre on waking. Sip through training. Pee should be pale yellow. Add electrolytes in heat or after long sessions.
+ Same sleep/wake time every night — including weekends	+ 30g protein at every meal — chicken, fish, eggs, dairy	+ 500ml water on waking, before anything else
+ No screens 30 min before bed — protect melatonin	+ Carbs around training (rice, pasta, oats, fruit)	+ Sip steadily through every training session
+ Cool, dark, quiet room — 18–20°C optimal	+ Half plate vegetables at lunch and dinner	+ Add electrolytes in heat or after Day 4
+ Sunlight in your eyes within an hour of waking	+ Cut soda, energy drinks, and processed sugar	+ Pee should be pale yellow, not clear, not dark

— FROM THE COACH

COACH DAVID CIBOCH

**M.ED. SPORT SCIENCE / S&C / NATIONAL TEAM
COACH**

I'm a sport-science coach who has spent the last decade working with hockey players from grassroots through national-team level — including head S&C work with the UAE National Ice Hockey Team. I also work as a Physical Education and Sport Science teacher.

This program is the off-season plan I build for the players I coach in person. Block periodization, hockey-specific transfer, no garbage volume, no fluff. Bodyweight and bands only because those are the limits I work within when I'm building athletes who don't have access to a high-performance facility.

If you take it seriously — four sessions a week, twelve weeks straight, the protocols as written — you'll show up to camp measurably faster, more powerful, and harder to play against. That's the standard.

“The players who train smart between seasons are the players who decide what happens during the seasons.”

— COACH DAVID

— THE NEXT CHAPTER

YOU FINISHED TWELVE WEEKS. *what's next?*

In-season strength maintenance. Pre-season power retention. Position-specific programming. The work continues all year. Off-season is where you build the engine. In-season is where you protect it.

IN-SEASON MAINTENANCE PROGRAM — COMING NEXT

Two sessions per week. 35 minutes each. Maintains the power and strength you built across these twelve weeks without interfering with on-ice performance. Built for the long competitive season ahead.

COMING SOON · THE ELITE HOCKEY DRILLS APP

228+ hockey-specific exercises across 15 categories. Full structured programs. Video demonstrations for every exercise. Progress tracking. Built specifically for hockey players. Founders pricing available on the waitlist.

*“Be the first to know when the app drops.
Weekly drills, coaching breakdowns, and behind-the-scenes
content.”*
